The provider will then arrange for assessment to take place, this will be within 7 days however if the need is more urgent this can be arrange within 1-2 days. Following assessment the provider will link with the individual and their care manager and progress admission, following admission regular reviews will take place which will involve the service user, statutory worker, residential key worker and any other involved person. The Glasgow City alcohol related death research assistant provides an analysis and summary report of the key characteristics of those who have died in Glasgow City of an alcohol related death. The report is disseminated and discussed at the Alcohol Harms Group which has a focus on alcohol death prevention and harm reduction activity. The Harms Group's objectives are to co-ordinate, monitor and report on the work identified in the Alcohol & Drug Death Prevention Action Plan, this action plan is directly informed by the alcohol related death review information.

A rapid alert is done for every death of a service user. Every death is reviewed by the team and learning shared through management structures. Reviews of drug related death trends are led by the requirement to complete and contribute to the National Drug Related Deaths Database (NDRDD) which collects detailed information regarding the nature and social circumstances of individuals who have died of a drug related death. Updates are provided for every Drug Harms group meeting and a comprehensive report is provided annually to the Glasgow City ADP Harms Group and informs the Drug Death Prevention Action Plan. Furthermore information on drug related deaths and trends have been monitored by the Drug Death Research Associate in close collaboration with Police Scotland, the Procurator Fiscal and The Department of Forensic Medicine, Glasgow University. This has allowed the Drug Harms Group to prioritise activity based on the evidence.
